

ABSTRACT OF THE DISCLOSURE

A method for complexing AHF in a dispersed medium, includes: a) providing an AHF protein, b) altering the conformational state of the AHF protein to expose
5 hydrophobic domains therein, c) binding a stabilizer to the exposed hydrophobic domains, and d) at least partially reversing the alteration to associate at least a portion of the protein with the stabilizer. A pharmaceutically effective stabilized AHF dosage wherein above about 0.5% , preferably above about 3%, and more preferably above about 25%, of the AHF molecule is associated with a stabilizer is also disclosed.
